DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/21/05 has been entered.

Response to Amendment

2. Applicant's amendment received on 2/22/05 has been entered and made of record. Currently, **claims 1-39** are pending.

Allowable Subject Matter

3. **Claims 1-39** are allowed.

4. The following is an examiner's statement of reasons for allowance:

Regarding **claims 1, 17, and 24**, in the examiner's opinion, it would not have been obvious to one of ordinary skill in the art at the time the invention was made to have the system, as claimed, include the features of communicating a request for a digital document data file to a plurality of scanners and receiving from any one of the scanners an autonomous acceptance of the request issued upon its selection by an operator by means of the operator control unit of that scanner. The closest prior art, previously indicated as Toda (U.S. Patent Number 6,256,107),

Art Unit: 2622

fails to expressly disclose of allowing an operator at any one of the plurality of scanners to select a scanning operation based on the request. Further, none of the other prior art was found that teaches this feature. Because of this, being a limitation that was added in the amendment dated 2/22/05, the claims are rendered allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Pertinent Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Kumpf *et al.* (U.S. Patent Number 6,412,022) discloses a system of using multiple scanners;

Lo *et al.* (U.S. Patent Number 5,911,044) discloses a network scanning system having which transmits acknowledge commands in response to a scanning session request. However, Lo fails to expressly teach of receiving an autonomous acceptance of the request issued upon its selection by an operator by means of a local operator control unit of that scanner; and

Onaga (U.S. Patent Number 5,862,404) discloses a system of searching for intelligent peripheral devices from a administrator's workstation. However, Onaga fails to expressly teach of receiving an autonomous acceptance of the request issued upon its selection by an operator by means of a local operator control unit of that scanner.
